

Figure 6.22.1.4. Proportion of iterations when at least one two sea-winter female was present in three areas of the Penobscot River watershed: the Upper Penobscot (i.e., above West Enfield Dam), the Piscataquis (i.e., the Piscataquis River watershed), and the Lower Penobscot (i.e., below the West Enfield Dam). Values are shown for generations 1–10 for scenarios using mean two sea-winter female marine survival rates during 1971–1990, 1991–2010, and 1971–2010 (base) (top to bottom, respectively) under the Base Case scenario.
