

Figure 6.3.2.2. Proportion of iterations when at least one two-sea-winter female was present in three areas of the Penobscot River watershed: the Upper Penobscot (i.e., above West Enfield Dam), the Piscataquis (i.e., the Piscataquis River watershed), and the Lower Penobscot (i.e., below the West Enfield Dam). Values are shown for generations 1–10 for 0.25, 0.5, 1 (base), 2, and 4 times the base production potential cap (i.e., 2.5, 5, 10, 20, and 40 smolts per 100 m², top to bottom, respectively) under the Recovery scenario.
